Put Your EMR Data to Work with the i4C Dashboard

Clinics using AccuroEMR collect vast amounts of information that, if used effectively, offer incredible health-management potential. To help users realize that potential, OntarioMD has created the **Insights4Care (i4C) Dashboard**.

What is it?

The i4C Dashboard is a data management tool that works with AccuroEMR data to let you visualize and interpret your patient data according to common primary care indicators, across five categories: Practice Management, Chronic Disease Management, Prevention, Population Screening, and Preventative Care Bonuses. Use of the i4C Dashboard is free for participating providers (one-time set-up fees for locally hosted sites apply).

How does it work?

When activated in AccuroEMR, the i4C Dashboard carries out complex analysis of your EMR data according to the indicators you select. That information is then organized in your choice of pie chart, bar chart, table, or trend line, in the dashboard layout.

How does it help Accuro users?

In conjunction with AccuroEMR, the i4C Dashboard gives you the power to:

- Better understand your patient population and improve patient outcomes
- Look at patient populations as a whole or drill down to identify specific patients
- Translate dashboard results into action by looping back to Accuro to add flags, tasks, and reminders
- Provide more efficient care for chronic disease patients and maximize eligible provincial bonus claims
- Improve the quality of your EMR data by leveraging i4C Advisory Service staff to help standardize data entry
- Create custom dashboard layouts with up to 12 of your most important care indicators

i4C in Action

What kinds of data can you glean using the i4C Dashboard?

Here's a quick overview:

Use **Practice Management** indicators to:

- ☑ View active patients who've been seen in the past year
- ☑ View active patients who've been seen in the past 1-2 years
- ☑ View active patients who haven't been seen in more than 2 years

Use **Chronic Disease Management** indicators to:

- ☑ Understand your patient cohorts for Diabetes, Coronary Artery Disease, and Hypertension
- ☑ Identify possible missing diagnoses for patients who haven't been coded
- ☑ Identify the status of your patients with chronic disease. and those who are overdue for testing

Use **Population Screening** indicators to:

- ☑ Identify high-risk patients using indicators for vaccination, obesity, and smoking
- ☑ Focus on essential childhood vaccinations and senior patients' pneumococcal and influenza vaccine needs
- ☑ Schedule necessary patient recalls and plan specialty clinics

Use **Preventative Care Bonus** indicators to:

- ☑ Identify patients due for prevention and screening measures
- ☑ Determine eligibility according to an April-to-March fiscal year
- ☑ Ensure timely prevention and screening care throughout the year to avoid backlogs
